Application, No. 10/730,162

Paper dated June 8, 2007

Reply to Final Office Action of February 8, 2007

and Advisory Action of April 26, 2007

Attorney Docket No. 4444-032065

IN THE CLAIMS

Listing of Claims:

The following listing of claims will replace all prior versions, and listings, of

claims in the application:

1 (Currently Amended) A loudspeaker diaphragm comprising a base layer

having a woven fabric of a polyethylene naphthalate fiber impregnated with a thermosetting

resin, wherein the polyethylene nanhthalate fiber is an untwisted fiber.

2. (Original) A loudspeaker diaphragm according to claim 1, wherein the

thermosetting resin is an unsaturated polyester resin or a melamine resin.

3. (Cancelled)

4. (Original) A loudspeaker diaphragm according to claim 1, wherein at

least part of the polyethylene naphthalate fiber is coated with a second thermosetting resin.

5. (Original) A loudspeaker diaphragm according to claim 4, wherein the

thermosetting resin is an unsaturated polyester resin and the second thermosetting resin is an

epoxy resin or a melamine resin.

6. (Previously Presented) A loudspeaker diaphragm according to claim

1, wherein a fiber/resin ratio in the base layer is in the range of 60/40 to 80/20 by weight.

Attorney Docket No. 4444-032065

8.

7. (Original) A loudspeaker diaphragm according to claim 1, further

(Original)

comprising a thermoplastic resin layer.

A loudspeaker diaphragm according to claim 7, wherein the

thermoplastic resin layer contains at least one selected from the group consisting of nylon,

polyester, polyolefin, polystyrene, polyvinyl chloride, polyurethane, polysulfone, polyether

ketone, polyether ether ketone, polyacetal, polyalylate, polyamide, polyamideimide,

polycarbonate, modified polyphenylene ether, polyphenylene sulfide, polyacrylate, polymethyl

methacrylate, polyether imide, polyether sulfone, polytetrafluoroethylene, a liquid crystal

polymer and a thermoplastic elastomer.

9. (Original) A loudspeaker diaphragm according to claim 1, further

comprising a thermoplastic elastomer layer.

10. (Original) A loudspeaker diaphragm according to claim 9, wherein the

thermoplastic elastomer layer contains at least one selected from the group consisting of a

polyester elastomer, a polyurethane elastomer and a polyolefin elastomer.

11. (Original) A loudspeaker diaphragm according to claim 7, wherein the

thermoplastic resin layer has a finely foamed structure.

12. (Original) A loudspeaker diaphragm according to claim 11, wherein

an average diameter of a cell in the finely foamed structure is 10 to 60 Φm.

Attorney Docket No. 4444-032065

13. (Original) A loudspeaker diaphragm according to claim 1, wherein the

base layer comprises a woven fabric of cotton or an unwoven fabric of a liquid crystal polymer.

14. (Currently Amended) A loudspeaker comprising a loudspeaker diaphragm

having a base layer that has a woven fabric of a polyethylene naphthalate fiber impregnated with

a thermosetting resin, wherein the polyethylene naphthalate fiber is an untwisted fiber.

15. (Currently Amended) A method for manufacturing a loudspeaker

diaphragm comprising the steps of:

impregnating a woven fabric of a polyethylene naphthalate fiber with a

thermosetting resin and curing the thermosetting resin, so as to form a base layer;

adding inactive gas in a supercritical state to a molten thermoplastic resin and

extruding the mixture of the thermoplastic resin and the inactive gas at prescribed temperature

and pressure, so as to form a thermoplastic resin layer; and

laminating the base layer and the thermoplastic resin layer;

wherein the polyethylene naphthalate fiber is an untwisted fiber.

16. (Original) A method according to claim 15, wherein the inactive gas is

selected from the group consisting of nitrogen, carbon dioxide, argon, neon, helium, oxygen and

mixed gas thereof.

and Advisory Action of April 26, 2007

Attorney Docket No. 4444-032065

17. (Currently Amended) A loudspeaker diaphragm comprising a base layer as

the outermost layer, a thermoplastic resin layer and a thermoplastic elastomer layer, wherein the

base layer has a woven fabric of a polyethylene naphthalate fiber impregnated with a

thermosetting resin, wherein the polyethylene naphthalate fiber is an untwisted fiber.

18. (Original) A loudspeaker diaphragm according to claim 17, wherein

the thermoplastic resin layer is an intermediate layer composed of a film and the thermoplastic

elastomer layer is the innermost layer composed of a woven fabric or an unwoven fabric.

19. (Original) A loudspeaker diaphragm according to claim 18, wherein a

thermoplastic elastomer constituting the thermoplastic elastomer layer has a melting point higher

than that of a thermoplastic resin constituting the thermoplastic resin layer.

20. (Currently Amended) A loudspeaker diaphragm according to claim 1 [[3]],

wherein the polyethylene naphthalate fiber is a mono-filament.
